Our Client, a successful player in the satellite systems consultancy field, is looking for a

Satcom Payload Systems Engineer

to join their team in Toulouse.

Reporting directly to the CEO, the successful candidate will work closely with internal technical teams and with the customer during all phases of the telecommunications satellite and associated ground segment procurement.

Key Tasks and Responsibilities

Responsibilities will include:

- Performing technical system analysis to support payload architectures;
- Leading and/or assisting in the analysis and development of payload specifications and SoWs during the Request for Proposal preparation, bid evaluation and contract negotiations;
- Providing advice relating to technical and schedule risks on programs and suggesting ways of mitigating the risks;
- Providing expert technical support to customer programs, interfacing directly with customer staff or external consultants;
- Analysing design review packages and participating in design review meetings;

Skills & Experience

- Engineering diploma or equivalent;
- A minimum of 8 years of industry experience in payload engineering for telecommunication satellites;
- Experience with the design and/or procurement, analysis, qualification, testing and implementation of telecommunication satellites payloads equipments and subsystems;
- Experience in interacting with satellite operators and satellite manufacturers;
- Confident working directly with customers and subcontractors at technical level;
- Excellent problem-solving abilities and mediation skills;
- Excellent communication skills (both written and verbal), presentation and customer interaction skills;
- Ability to manage a team;
- Ability to share skills and knowledge with others;
- Proficiency with office computer equipment and software;
- Ability to multi-task and work in a fast-paced office setting;
- Fluency in English is mandatory, knowledge of French is an advantage;
- Willingness and ability to travel as required;
- Eligible to work in France.
